EXPERIENCE

Senior Executive – AI Engineer

Jul. 2026 – Present

EXL Service Philippines, Inc.

- Design and build AI pipelines that boost client sales performance and streamline core business processes — from data ingestion through LLM reasoning to downstream system actions.
- Partner with business stakeholders to map manual, high-friction workflows, then re-architect them as automated AI-driven pipelines with measurable throughput and cycle-time gains.
- Deploy production LLM and agentic automation into client sales and operations stacks, reducing manual handling time and increasing conversion throughput.

Tech Lead & Co-Founder

Oct. 2025 – Present

Catalyx Solutions (4-person startup)

Remote

- Co-founded and led a 4-person software startup building security automation and AI-powered SaaS products.
- Architected and directed development across multiple products: phishing detection, chatbot automation, and OCR form processing platforms.
- Improved phishing detection efficiency by 70% and cut manual threat triage by 10 hours per week through automated CTI aggregation.
- Defined SDLC processes, managed cloud infrastructure and CI/CD pipelines, and enforced code quality standards to maintain 99.9% uptime across active projects.
- **Lead Projects:** Secuvia (phishing detection SaaS), ChatFlow AI (Messenger chatbot SaaS), Smart Form Encoder (OCR government form processing).

Software Engineer

Apr. 2026 – Jul. 2026

Tenext.AI

Makati, Philippines (Hybrid)

- Configured and deployed AI agents — chatbots, callbots, and emailbots — to automate customer interactions and business workflows for clients.
- Embedded conversational AI agents into client CRMs and websites, automating lead capture and reducing manual sales operations.
- Collaborated with the engineering team to design and implement real-world automation solutions tailored to diverse client requirements.

Software Engineer Intern

Feb. 2026 – May 2026

Pilipinas Micro-matrix Technology Inc. (PMTI)

Subic Bay Freeport Zone, Philippines (Hybrid)

- Contributed to production-grade backend development using the **Laravel** framework.
- Built **ePasada**, a digital platform supporting drivers with streamlined operations, trip management, and connectivity features.

Software Engineer

Nov. 2025 – Feb. 2026

Lujo PH (concurrent contract alongside Catalyx)

Remote

- Delivered backend services and REST API development for core business operations as a concurrent part-time contract.
- Designed and developed **Avitus IMS**, a nationwide inventory management system actively used by Avitus operations across multiple branches in the Philippines.
- Built and optimized REST APIs, improving system reliability and performance across production workloads.
- Implemented secure coding practices and participated in code reviews to maintain production code quality.

Software Engineer Intern

Mar. 2025 – Aug. 2025

Kloudtech

Balanga City, Philippines

- Developed backend and frontend components for SaaS applications.
- Optimized CI/CD workflows, reducing deployment times by 20%.
- Participated in sprint planning, code reviews, and system integration to accelerate feature delivery.

PROJECTS & PRACTICAL EXPERIENCE

Secuvia | *AWS Lambda, DynamoDB, Cloudflare R2, CTI Integrations*

- Architected a serverless SaaS platform using AWS Lambda microservices for multi-tenant phishing threat processing.
- Implemented automated email ingestion via Gmail API and IMAP (IDLE) for continuous real-time phishing analysis.
- Aggregated threat intelligence from VirusTotal, AbuseIPDB, IPQualityScore, Shodan, URLhaus, and OTX to enrich URLs, domains, and IPs.
- Leveraged LLM-based analysis to correlate multi-source CTI signals and produce unified verdicts with confidence scoring.
- Utilized DynamoDB for structured threat storage, Cloudflare R2 for artifact storage, and Vercel for frontend deployment.
- Reduced manual phishing triage by over 80% through automated multi-source CTI aggregation and AI-assisted decision logic.

Auralis | *AI, Security Automation, SOC Dashboard*

- Designed and developed an end-to-end automated phishing detection platform, presented at the **First AI Regional Conference (GDG)** at Holy Angel University.
- Implemented automated email ingestion via IMAP and Gmail API, orchestrated with n8n workflows to triage incoming email.
- Applied AI-based analysis to interpret CTI responses, correlate indicators, and generate a final phishing verdict and risk score.
- Designed an interactive analyst dashboard for threat visualization, filtering, and investigation workflows.
- Reduced manual phishing analysis workload by 70–75% through AI-assisted automation and centralized threat visibility.

ChatFlow AI | *n8n, Meta Graph API, Next.js, Gemini AI*

- Architected a multi-tenant SaaS platform enabling businesses to automate Facebook Messenger replies and post comment responses.
- Integrated Meta Graph API for webhook-based real-time message and comment ingestion.
- Designed conversational flows using Gemini as the reasoning agent for contextual, human-like responses.
- Orchestrated automation workflows via n8n for lead capture, CRM sync, escalation logic, and smart triggers.
- Implemented webhook verification, rate limiting, and token security for production-grade reliability.

Smart Form Encoder | *Next.js, React Native, Django, PaddleOCR, LLM*

- Designed and built a cross-platform system for automated digitization and verification of physical government forms.
- Built a React Native mobile app for guided form capture, optimizing image quality for downstream OCR accuracy.
- Developed a Django backend integrating PaddleOCR for field-level text extraction from scanned government documents.
- Applied LLM post-processing to correct OCR errors, normalize field values, and output structured validated JSON.
- Created a Next.js web dashboard for document verification, field correction, and approval workflows.

Avitus IMS | *Django, Next.js, MySQL*

- Designed and developed a centralized inventory management system actively used by Avitus operations across multiple branches in the Philippines.
- Implemented real-time inventory tracking, stock movement logging, and branch-level visibility to prevent stock discrepancies.
- Built a scalable REST API using Django to manage products, suppliers, branches, and transaction history.
- Developed a responsive admin dashboard with Next.js, MUI, and TanStack for inventory monitoring and reporting.

FitUp | *React, TypeScript, Node.js, Groq API, PostgreSQL, RAG*

- Engineered an AI-driven fitness planner generating structured workout programs based on user goals, body metrics, and experience level.

- Implemented a **RAG pipeline** to ground workout recommendations in a curated fitness knowledge base, enabling evidence-based and personalized program generation.
- Built progress tracking, analytics, and adaptive plan recommendations, increasing user engagement by 40%.

AckAI | *Agora AI, Amazon Kendra, DynamoDB, S3, React, Express*

- Developed a real-time AI legal assistant platform for the **AWS Cloud Club PH Innovation Cup 2025** hackathon.
- Integrated Agora Conversational AI and Amazon Kendra for RAG-based intelligent legal document retrieval and Q&A.
- Architected a scalable backend using Express, DynamoDB, and S3 for secure context storage and document search.

TryHackMe Labs | *Cybersecurity, SOC*

- Completed hands-on labs covering SIEM, threat detection, incident response, and privilege escalation.
- **Ranked consistently in the Top 4% globally.**

Security Tools Practice | *Offensive & Defensive Security*

- Conducted penetration testing and vulnerability assessments using Burp Suite, Wireshark, Metasploit, and Hashcat.
- Performed threat intelligence investigations using MISP, OpenCTI, UrlScan.io, Abuse.ch, and Cisco Talos.

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, Node.js, Java, PHP, SQL

Frontend: Next.js, React, React Native, Angular, Svelte, TailwindCSS, Bootstrap, GrapesJS, Chart.js, ShadCN UI, MUI, Redux, Zustand

Backend: Express.js, Django, Laravel, REST APIs, Firebase, PaddleOCR

Cloud & Infra: AWS (Lambda, DynamoDB, Kendra, S3, EC2, Route53, Lightsail), Cloudflare, Supabase, Vercel, Koyeb, Cloud Run

Databases: DynamoDB, PostgreSQL, MySQL, Firebase

AI Agents & Conversational AI: AI Agent Configuration & Orchestration, Chatbot/Callbot/Emailbot Development, Prompt Engineering, System Prompt Design, Conversation Flow Design, Intent Recognition (NLU), Function Calling & Tool Use, Knowledge Base Integration, Multi-channel Agent Deployment, Voice AI

AI Automation & Integration: Workflow Automation (n8n), CRM Integration & Agent Embedding, Lead Capture Automation, Webhook Orchestration, Business Process Automation, Gmail API, Meta Graph API, REST API Integration

AI Models & Frameworks: RAG Pipelines, LLM Integration, Vector Embeddings, OpenAI, Gemini, Groq, OpenRouter, Agora AI

AI Dev Tools: Cursor, Claude Code, Copilot, Codex

Security Tools: Metasploit, Burp Suite, Wireshark, Hashcat, Hydra, John the Ripper, MISP, OpenCTI, VirusTotal, Abuse.ch, Talos Intelligence

Operating Systems: Windows, Parrot OS, Kali Linux, Ubuntu

Other: Secure Coding, SOC Fundamentals, Threat Intelligence, OCR Processing

ACHIEVEMENTS

Winner — Base PH Hackathon (Oct. 2025)

Top 4% Global Ranking on TryHackMe

DataCamp Scholar

Participant — AWS Cloud Club PH Innovation Cup 2025

Participant — First AI Regional Conference Hackathon 2025 (GDG, Holy Angel University)

EDUCATION

Gordon College

Bachelor of Science in Computer Science

Olongapo, Philippines

Jul. 2026

AFFILIATIONS

Committee Member, Operations — AWS Cloud Club, Gordon College

Member — TryHackMe Community
